

ISOLATION BARRIER PRE-CONSTRUCTION ACTIVITIES

The following activities have been identified as potential pre-construction activities in preparation for the installation of the proposed isolation barrier:

1. Conduct an accurate land survey to assist in the possible realignment of OU1/Area 1;
2. Conduct vegetation clearing, both along the barrier path and in areas identified as storage/staging for excavated wastes;
3. Removing and/or relocating utilities in the areas of disturbance, including gas and leachate collection systems, compressed air lines, etc;
4. Determining locations and begin installation of any bird mitigation devices that may be required by the St. Louis Airport Authority;
5. Establish locations/begin the installation of the perimeter air monitoring stations;
6. Begin the installation of mesh barrier inside the fenced area along St. Charles Rock Road.
